

NEW BUSINESS OF THE YEAR

FEATHER TOUCH BROWS ESPERANCE

Feather Touch Brows Esperance Practitioner Karen Chivell offers a first-class Feather Touch Brows (microblading) service. Feather Touch Brows is a semi-permanent tattoo technique that transforms sparse brows into very natural looking, more defined, fuller brows.

Feather Touch Brows are applied with very natural, fine hair strokes to enhance the natural brow shape. The treatment is ideal for clients who struggle with 'patchy, sparse or thinning' eyebrows. If you have lived through the "pencil thin" era, or you have a medical condition that prevents your eyebrows from growing, Feather Touch Brows are perfect for you as they are individually customised to suit each client.

Karen's goal is always to naturally fill in eyebrows with hair like strokes that mimic the natural brow hair. Results are immediate, with the final result after the perfection session that is required 6 weeks after your first visit.

The treatment lasts 12-18 months depending on your skin type and lifestyle, and touch-up appointments can be made.

Dee and Karen aim to add more services to the business over time, and they are very excited to be working in a community that they love so much.
